As much as possible, stay in a specific room and away from other people and pets in your home. If possible, you should use a separate bathroom. If you need to be around other people or animals in or outside of the home, wear a mask.

Separate yourself from other people in your home, this is known as Home Isolation

- As much as possible, stay in a specific room and away from other people and pets in your home. If possible, you should use a separate bathroom. If you need to be around other people or animals in or outside of the home, wear a mask.

Steps to Help Prevent the Spread of COVID-19 If You Are Sick

Follow the steps below: If you are sick with COVID-19 or think you might have it, follow the steps below to help protect other people in your home and community.

Stay Home Except to Get Medical Care

- Stay home: People who are mildly ill with COVID-19 are able to recover at home. Do not leave, except to get medical care. Do not visit public areas.
- Stay in touch with your doctor. Call before you get medical care. Be sure to get care if you feel worse or you think it is an emergency.
- Avoid public transportation: Avoid using public transportation, ride-sharing, or taxis.

Wear a Facemask If You Are Sick

- You should wear a mask over your nose and mouth if you must be around other people or animals, including pets (even at home).
- You don’t need to wear the mask if you are alone. If you can’t put on a mask (because of trouble breathing, for example), cover your coughs and sneezes in some other way. Try to stay at least 6 feet away from other people. This will help protect the people around you.
- Masks should not be placed on young children under age 2 years, anyone who has trouble breathing, or anyone who is not able to remove the mask without help.

Separate Yourself from Other People in Your Home

- Cover your coughs and sneezes
- Call ahead: If you have a medical appointment, call your doctor’s office or emergency department, and tell them you have or may have COVID-19. This will help the office protect themselves and other patients.
- Avoid sharing personal household items
- Wash your hands often with soap and water for at least 20 seconds. This is especially important after blowing your nose, coughing, or sneezing; going to the bathroom; and before eating or preparing food.

Clean your Hands Often

- Wash hands: Wash your hands often with soap and water for at least 20 seconds. This is especially important after blowing your nose, coughing, or sneezing; going to the bathroom; and before eating or preparing food.
- Hand sanitizer: If soap and water are not available, use an alcohol-based hand sanitizer with at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry.
- Soap and water: Soap and water are the best option, especially if hands are visibly dirty.
- Avoid touching: Avoid touching your eyes, nose, and mouth with unwashed hands.

Stay in touch with your local Health Center. Call us before you come in. If you feel worse or you think it is an emergency, ask to speak to a nurse.

For weekend and after hours questions regarding COVID-19 Corona Virus please dial the Empire Nurse hotline at 1-877-825-5276
I THINK OR KNOW I HAD COVID-19, AND I HAD SYMPTOMS

You can be around others after:
- 10 days since symptoms first appeared and
- 24 hours with no fever without the use of fever-reducing medications and
- Other symptoms of COVID-19 are improving*

*Loss of taste and smell may persist for weeks or months after recovery and need not delay the end of isolation

Most people do not require testing to decide when they can be around others; however, if your healthcare provider recommends testing, they will let you know when you can resume being around others based on your test results.

Note that these recommendations do not apply to persons with severe COVID-19 or with severely weakened immune systems (immunocompromised). These persons should follow the CDC guidance for “I was severely ill with COVID-19 or have a severely weakened immune system (immunocompromised) due to a health condition or medication. When can I be around others?” Located at https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/end-home-isolation.html

MONITOR YOUR SYMPTOMS

- Seek medical attention, but call first: Seek medical care right away if your illness is worsening (for example, if you have difficulty breathing).
- Call your doctor before going in: Before going to the doctor’s office, call ahead and tell them your symptoms. They will tell you what to do.
- Wear a face mask: If possible, put on a face mask before you enter the building. If you can’t put on a face mask, try to keep a safe distance from other people (at least 6 feet away). This will help protect the people in the office or waiting room.
- Follow care instructions from your healthcare provider and local health department: Your local health authorities will give instructions on checking your symptoms and reporting information.

If you develop emergency warning signs for COVID-19 get medical attention immediately. Emergency warning signs include*:
- Difficulty breathing or shortness of breath
- Persistent pain or pressure in the chest
- New confusion or inability to arouse
- Bluish lips or face

*This list is not all inclusive. Please consult your medical provider for any other symptoms that are severe or concerning.

Call 911 if you have a medical emergency: If you have a medical emergency and need to call 911, notify the operator that you have or think you might have, COVID-19. If possible, put on a facemask before medical help arrives.
